Project Title:	Harvest: An Automated Member Engagement and Tracking Platform for PUP SONS
Student Name:	1. Hamzon, Nharill Kate C.
	2. Mamaril, Jayson Cris L.
	3. Peñamora, Cielle Mae C.
	4. San Luis, Ghani Regina Gold B.

Summary	This proposal outlines the design, development, and launch of Harvest, an automated member engagement and tracking platform for PUP Seeds of the Nations (PUP SONS), a student organization at the Polytechnic University of the Philippines (Client 3). Harvest aims to digitize and automate the way the organization manages its members — from tracking engagement and participation to monitoring member activity and generating insights. The platform will provide officers with a centralized system to efficiently manage member records, monitor involvement across events and activities, and foster a more engaged and connected organization.
Project Goals and Objectives	The primary goals of the People Tracker system are: • Member Registration & Profile Management: Provide a centralized database for storing and managing member information including contact details, year level, course, and membership status. • Role & Committee Assignment: Allow officers to assign roles, positions, and committee memberships, making it easier to manage organizational structure and responsibilities. • Attendance & Event Tracking: Monitor member attendance in meetings, events, and activities, with automated records and participation summaries for each member.

For Web and Mobile

	• Reports & Organization Analytics: Generate reports on membership growth, active vs. inactive members, event participation rates, and other key organizational metrics. • Secure Access & Admin Control: Implement role-based access control so officers and admins can manage data securely, while members can view their own profiles and activity history.
Project Scope	1. Design & Development Phases: Phase 1: Discovery & Planning • Requirement gathering (client discussions, competitor analysis, and goal setting) • Project timeline development • Initial wireframes and mockups Phase 2: Design & User Experience • Custom website design based on client feedback • UX/UI design for optimal user interaction • Mobile-first approach Phase 3: Website Development • Frontend development (HTML5, CSS3, JavaScript) • Backend development (if applicable, CMS integration such as WordPress, Shopify, etc.) • Responsive design implementation Phase 4: Content Integration & SEO Optimization • Content creation/placement (provided by the client or created by us) • On-page SEO optimization • Image and media optimization Phase 5: Testing & Quality Assurance • Cross-browser testing (Chrome, Firefox, Safari, Edge) • Device testing (mobile, tablet, desktop) • Performance and speed optimization Phase 6: Launch & Post-Launch Support • Website deployment to live server • CMS training (if required) • Ongoing technical support for 30 days post-launch
